

# MicroVIEW

*Software for the control and operation of industrial installations*

## THE OFFER

### 1. PROJECT STUDY

We support you in the study and functional analysis of your project in order to identify the ideal software infrastructure for your new or existing installation.

### 2. DEVELOPMENT AND VALIDATION

We develop the solution according to the functionalities you wish to benefit from and we make it evolve on the base of the study carried out upstream, before final validation jointly, for a perfect integration on your installation.

### 3. COMMISSIONING & FORMATION

We carry out the commissioning of the solution on your installation and provide training for future users, whatever is their role in the operating process.

## ADVANTAGES

- Free user licence
- Evolutive and flexible solution
- Compatible with market standards
- Online and local supervision
- Email alerts
- Data security
- Commissioning included
- Developed in France
